AC MACHINES

Halbach permanent magnet machines and applications: a review p299

ACOUSTICS AND ULTRASONICS

Digitally-controlled PWM inverter modulated by multi-random technique with fixed switching frequency p62

ADAPTIVE CONTROL

Adaptive directive neural network control for three-phase AC/DC PWM converter p425
Passivity-based adaptive controllers for quasi-resonant buck convertor p398

ARTIFICIAL INTELLIGENCE

Robust control for induction servo motor drive p279

ASYNCHRONOUS MACHINES

Combined magnetising flux oriented control of the cascaded doubly-fed induction machine p354
H$^{\infty}$ control of induction motor drives p272
Modelling of induction machines with skewed rotor slots p45
Online stator fault diagnosis in induction motors p537
Performance evaluation of doubly-fed twin stator induction machine drive with voltage and current space vector control schemes p287
Realisation of tests to determine the parameters of the thermal model of an induction machine p393
Robust control for induction servo motor drive p279
Stability of sliding-mode current control for high performance induction motor position drives p69
Three-phase soft-switching inverter for induction motor drives p8

CAPACITORS

High-power-factor single-phase capacitor clamped rectifier p214

CIRCUIT COMPONENTS

Auxiliary resonant snubber bridge-leg associated soft-switching PWM inverter type DC-DC converter family with bidirectional active switches and voltage clamping diodes p487
Steady-state algorithm for switching power electronic devices p245
Turn-off behaviour of epitaxial planar and trench gate IGBTs and nonepitaxial planar gate IGBT under hard and soft switchings p443

CIRCUIT THEORY AND DESIGN

Design considerations and loss analysis of zero-voltage switching boost converter p29
Instantaneous current-vector-controlled zero-current soft switching inverter using B-SITs p1
Partial-core transformer design using reverse modelling techniques p513
Performance evaluations of three-phase current-fed soft switching PWM converter with switched capacitor-type quasi-resonant snubber p431
Seven self-lift DC-DC converters, voltage lift technique p329
Signal flow graph nonlinear modelling of interleaved converters p410
Steady-state algorithm for switching power electronic devices p245
Zero-current-switching switched-capacitor converters p403

CLOSED LOOP SYSTEMS

Performance evaluation of doubly-fed twin stator induction machine drive with voltage and current space vector control schemes p287

CONTROL APPLICATIONS

Robust output tracking control of a linear DC brushless motor for transportation in manufacturing system p119

CONTROL SYSTEM ANALYSIS

Adaptive directive neural network control for three-phase AC/DC PWM converter p425
Autonomous reluctance generator p105
Combined magnetising flux oriented control of the cascaded doubly-fed induction machine p354
Control strategy of advanced 25 kV-50 Hz electrified railway systems p97
Development of a linear brushless DC motor drive with robust position control p111
Field-weakening regime for brushless DC motors based on instantaneous power theory p265
H$^{\infty}$ control of induction motor drives p272
Novel analytical model for design and implementation of three-phase active power filter controller p369
Passivity-based adaptive controllers for quasi-resonant buck convertor p398
Performance evaluation of doubly-fed twin stator induction machine drive with voltage and current space vector control schemes p287
Robust control for induction servo motor drive p279
Robust quantitative speed control of a switched reluctance motor drive p345
Simplified control method for single-phase multilevel active rectifier with current harmonic filtering characteristics p85
Single-stage photovoltaic energy conversion system p339

CONTROL SYSTEM STABILITY

Control strategy of advanced 25 kV-50 Hz electrified railway systems p97
Development of a linear brushless DC motor drive with robust position control p111
H$^{\infty}$ control of induction motor drives p272
Passivity-based adaptive controllers for quasi-resonant buck convertor p398
Robust control for induction servo motor drive p279
Robust hysteresis current-controlled PWM scheme with fixed switching frequency p503
Robust output tracking control of a linear DC brushless motor for transportation in manufacturing system p119
Robust quantitative speed control of a switched reluctance motor drive p345
Stability of sliding-mode current control for high performance induction motor position drives p69

CONTROL SYSTEM SYNTHESIS

Adaptive directive neural network control for three-phase AC/DC PWM converter p425
Combined magnetising flux oriented control of the cascaded doubly-fed induction machine p354
Control strategy of advanced 25 kV-50 Hz electrified railway systems p97
Development of a linear brushless DC motor drive with robust position control p111
Field-weakening regime for brushless DC motors based on instantaneous power theory p265
H$^{\infty}$ control of induction motor drives p272
Novel analytical model for design and implementation of three-phase active power filter controller p369
Passivity-based adaptive controllers for quasi-resonant buck convertor p398
Performance evaluation of doubly-fed twin stator induction machine drive with voltage and current space vector control schemes p287
Robust control for induction servo motor drive p279
Robust output tracking control of a linear DC brushless motor for transportation in manufacturing system p119
Robust quantitative speed control of a switched reluctance motor drive p345
Simplified control method for single-phase multilevel active rectifier with current harmonic filtering characteristics p85
Single-stage photovoltaic energy conversion system p339

DC MACHINES

Development of a linear brushless DC motor drive with robust position control p111
Field-weakening regime for brushless DC motors based on instantaneous power theory p265
Halbach permanent magnet machines and applications: a review p299
Robust output tracking control of a linear DC brushless motor for transportation in manufacturing system p119

DRIVES

Development of a linear brushless DC motor drive with robust position control p111
H$^{\infty}$ control of induction motor drives p272
Performance evaluation of doubly-fed twin stator induction machine drive with voltage and current space vector control schemes p287
Robust control for induction servo motor drive p279
Robust quantitative speed control of a switched reluctance motor drive p345
Stability of sliding-mode current control for high performance induction motor position drives p69
Three-phase soft-switching inverter for induction motor drives p8

ELECTRIC MACHINES

Design optimisation and comparison of tubular permanent magnet machine topologies p456
Development of a linear brushless DC motor drive with robust position control p111
Robust control for induction servo motor drive p279
Robust output tracking control of a linear DC brushless motor for transportation in manufacturing system p119

ELECTROMAGNETIC FIELDS

Field-weakening regime for brushless DC motors based on instantaneous power theory p265

ELECTRIC VARIABLES CONTROL

Adaptive directive neural network control for three-phase AC/DC PWM converter p425
Control strategy of advanced 25 kV-50 Hz electrified railway systems p97
Development considerations of DSP-controlled PWM VSC-based STATCOM p449
Development of a linear brushless DC motor drive with robust position control p111
High-power-factor single-phase capacitor clamped rectifier p214
Instantaneous current-vector-controlled zero-current soft switching inverter using B-SITs p1
Integrated power factor compensator based on sliding mode controller p237
Low-harmonic resonant CLL-type AC/DC converter p187
Maximum power point tracking control of IDB converter supplied PV system p494
Novel analytical model for design and implementation of three-phase active power filter controller p369
Novel fast-acting predictive current mode controller for power electronic converters p133
Parallel operation of series-connected PWM voltage regulators without control interconnection p141
Passivity-based adaptive controllers for quasi-resonant buck convertor p398
Phase-shift controlled DC-DC convertor with bi-directional power flow p193
Robust hysteresis current-controlled PWM scheme with fixed switching frequency p503
Simplified control method for single-phase multilevel active rectifier with current harmonic filtering characteristics p85
Single-stage high-power-factor dimmable electronic ballast with asymmetrical pulse-width-modulation for fluorescent lamps p125
Single-stage high power factor electronic ballast for fluorescent lamps with constant power operation p465
Single-stage photovoltaic energy conversion system p339

Stability of sliding-mode current control for high performance induction motor position drives p69
Zero-current switching fixed frequency resonant-transition square wave converters p475

ENERGY CONVERSION

Maximum power point tracking control of IDB converter supplied PV system p494
Single-stage photovoltaic energy conversion system p339

ENGINEERING COMPUTING

Autonomous reluctance generator p105
Design considerations and loss analysis of zero-voltage switching boost converter p29
Development considerations of DSP-controlled PWM VSC-based STATCOM p449
Digitally-controlled PWM inverter modulated by multi-random technique with fixed switching frequency p62
Instantaneous current-vector-controlled zero-current soft switching inverter using B-SITs p1
Signal flow graph nonlinear modelling of interleaved converters p410
Steady-state algorithm for switching power electronic devices p245

EXPERT SYSTEMS

Application of local memory-based techniques for power transformer thermal overload protection p163

FEEDBACK

A bidirectional, sinusoidal, high-frequency inverter design p315
Digitally-controlled PWM inverter modulated by multi-random technique with fixed switching frequency p62

FILTERS AND FILTERING

Design and implementation of a modified Fourier analysis harmonic current computation technique for power active filters using DSPs p21
Novel analytical model for design and implementation of three-phase active power filter controller p369

INSTRUMENTATION AND MEASUREMENT

Auxiliary resonant snubber bridge-leg associated soft-switching PWM inverter type DC-DC converter family with bidirectional active switches and voltage clamping diodes p487

INSULATED GATE FIELD EFFECT TRANSISTORS

Analysis and design of non-dissipative active clamp for forward converters p419
Auxiliary resonant snubber bridge-leg associated soft-switching PWM inverter type DC-DC converter family with bidirectional active switches and voltage clamping diodes p487
Design considerations and loss analysis of zero-voltage switching boost converter p29
Design optimisation of a resonant turn-off snubber for high-power converters p229
Development considerations of DSP-controlled PWM VSC-based STATCOM p449
Turn-off behaviour of epitaxial planar and trench gate IGBTs and nonepitaxial planar gate IGBT under hard and soft switchings p443
Zero-current-switching switched-capacitor converters p403

LIGHTING

Single-stage electronic ballast with unity power factor p171
Single-stage high-power-factor dimmable electronic ballast with asymmetrical pulse-width-modulation for fluorescent lamps p125
Single-stage high power factor electronic ballast for fluorescent lamps with constant power operation p465

MAGNETIC MATERIALS AND DEVICES

A bidirectional, sinusoidal, high-frequency inverter design p315
Combined magnetising flux oriented control of the cascaded doubly-fed induction machine p354
Halbach permanent magnet machines and applications: a review p299
Operating partial core transformers under liquid nitrogen conditions p293
Partial-core transformer design using reverse modelling techniques p513

MATHEMATICAL TECHNIQUES

Autonomous reluctance generator p105
Design and implementation of a modified Fourier analysis harmonic current computation technique for power active filters using DSPs p21
Harmonic analysis of PWM multi-level converters p35
Railway junction traffic control by heuristic methods p77
Real-time detection using wavelet transform and neural network of short-circuit faults within a train in DC transit systems p251
Signal flow graph nonlinear modelling of interleaved converters p410
Steady-state algorithm for switching power electronic devices p245

MEASUREMENT OF SPECIFIC VARIABLES

Digital method for power frequency measurement using synchronous sampling [comment and reply] p225
Realisation of tests to determine the parameters of the thermal model of an induction machine p393

MICROPROCESSORS

Design and implementation of a modified Fourier analysis harmonic current computation technique for power active filters using DSPs p21
Development considerations of DSP-controlled PWM VSC-based STATCOM p449

MULTIVARIABLE CONTROL SYSTEMS

Integrated power factor compensator based on sliding mode controller p237
Stability of sliding-mode current control for high performance induction motor position drives p69

NEURAL NETWORKS

Adaptive directive neural network control for three-phase AC/DC PWM converter p425
Real-time detection using wavelet transform and neural network of short-circuit faults within a train in DC transit systems p251

NONELECTRIC VARIABLES CONTROL

Combined magnetising flux oriented control of the cascaded doubly-fed induction machine p354
Development of a linear brushless DC motor drive with robust position control p111
Digitally-controlled PWM inverter modulated by multi-random technique with fixed switching frequency p62
Field-weakening regime for brushless DC motors based on instantaneous power theory p265
Performance evaluation of doubly-fed twin stator induction machine drive with voltage and current space vector control schemes p287
Robust quantitative speed control of a switched reluctance motor drive p345
Single-stage high-power-factor dimmable electronic ballast with asymmetrical pulse-width-modulation for fluorescent lamps p125
Stability of sliding-mode current control for high performance induction motor position drives p69
Torque ripple minimisation in a switched reluctance motor by optimum harmonic current injection p322

NONLINEAR CONTROL SYSTEMS

Control strategy of advanced 25 kV-50 Hz electrified railway systems p97

NUMERICAL ANALYSIS

Adaptive directive neural network control for three-phase AC/DC PWM converter p425
Autonomous reluctance generator p105
Modelling of induction machines with skewed rotor slots p45
Novel adaptive hysteresis band modulation strategy for three-phase inverters p51
Realisation of tests to determine the parameters of the thermal model of an induction machine p393
Steady-state algorithm for switching power electronic devices p245
Three-phase autonomous reluctance generator p438

OPTIMAL CONTROL

Field-weakening regime for brushless DC motors based on instantaneous power theory p265
H$^{\infty}$ control of induction motor drives p272
Novel fast-acting predictive current mode controller for power electronic converters p133
Robust output tracking control of a linear DC brushless motor for transportation in manufacturing system p119

OPTIMISATION

Railway junction traffic control by heuristic methods p77
Torque ripple minimisation in a switched reluctance motor by optimum harmonic current injection p322

PARAMETER ESTIMATION

Realisation of tests to determine the parameters of the thermal model of an induction machine p393

POWER CONVERTERS

A bidirectional, sinusoidal, high-frequency inverter design p315
Adaptive directive neural network control for three-phase AC/DC PWM converter p425
Analysis and design of non-dissipative active clamp for forward converters p419
Analysis of low frequency harmonics for continuous-conduction-mode boost power-factor correction p202
Auxiliary resonant snubber bridge-leg associated soft-switching PWM inverter type DC-DC converter family with bidirectional active switches and voltage clamping diodes p487
Control strategy of advanced 25 kV-50 Hz electrified railway systems p97
Design considerations and loss analysis of zero-voltage switching boost converter p29
Design optimisation of a resonant turn-off snubber for high-power converters p229
Development considerations of DSP-controlled PWM VSC-based STATCOM p449
Development of a linear brushless DC motor drive with robust position control p111
Digitally-controlled PWM inverter modulated by multi-random technique with fixed switching frequency p62
Evaluations of voltage-source soft-switching inverter with single auxiliary resonant snubber p207
Harmonic analysis of PWM multi-level converters p35
High-power-factor single-phase capacitor clamped rectifier p214
Instantaneous current-vector-controlled zero-current soft switching inverter using B-SITs p1
Integrated power factor compensator based on sliding mode controller p237
Low-harmonic resonant CLL-type AC/DC converter p187

Maximum power point tracking control of IDB converter supplied PV system p494
Novel adaptive hysteresis band modulation strategy for three-phase inverters p51
Novel fast-acting predictive current mode controller for power electronic converters p133
Novel technique for power factor correction in flyback converters p177
Overmodulation algorithm for space vector modulated inverters and its application to low switching frequency PWM techniques p521
Parallel operation of series-connected PWM voltage regulators without control interconnection p141
Passivity-based adaptive controllers for quasi-resonant buck convertor p398
Performance evaluations of three-phase current-fed soft switching PWM converter with switched capacitor-type quasi-resonant snubber p431
Phase-shift controlled DC-DC convertor with bi-directional power flow p193
Quasiresonant soft switching PWM voltage-fed high frequency inverter using SIT for induction heating applications p385
Regular-sampled harmonic elimination PWM control of single-phase two-level inverters p309
Robust hysteresis current-controlled PWM scheme with fixed switching frequency p503
Seven self-lift DC-DC converters, voltage lift technique p329
Signal flow graph nonlinear modelling of interleaved converters p410
Simplified control method for single-phase multilevel active rectifier with current harmonic filtering characteristics p85
Single-phase three-level regular-sampled selective harmonic elimination PWM p155
Single-stage electronic ballast with unity power factor p171
Single-stage high-power-factor dimmable electronic ballast with asymmetrical pulse-width-modulation for fluorescent lamps p125
Single-stage photovoltaic energy conversion system p339
Single-switch AC-AC converter with high power factor and soft commutation for induction heating applications p469
Snubber circuit for diode-clamped four-level inverter and converter p481
Steady-state algorithm for switching power electronic devices p245
Three-phase soft-switching inverter for induction motor drives p8
Zero-current switching fixed frequency resonant-transition square wave converters p475
Zero-current-switching switched-capacitor converters p403

POWER ELECTRONICS

Analysis and design of non-dissipative active clamp for forward converters p419
Auxiliary resonant snubber bridge-leg associated soft-switching PWM inverter type DC-DC converter family with bidirectional active switches and voltage clamping diodes p487
Design considerations and loss analysis of zero-voltage switching boost converter p29
Design optimisation of a resonant turn-off snubber for high-power converters p229
Evaluations of voltage-source soft-switching inverter with single auxiliary resonant snubber p207
High-power semiconductor device: a symmetric gate commutated turn-off thyristor p363
Instantaneous current-vector-controlled zero-current soft switching inverter using B-SITs p1
Quasiresonant soft switching PWM voltage-fed high frequency inverter using SIT for induction heating applications p385
Snubber circuit for diode-clamped four-level inverter and converter p481
Steady-state algorithm for switching power electronic devices p245
Turn-off behaviour of epitaxial planar and trench gate IGBTs and nonepitaxial planar gate IGBT under hard and soft switchings p443
Zero-current-switching switched-capacitor converters p403

POWER ENGINEERING COMPUTING

Application of local memory-based techniques for power transformer thermal overload protection p163
Autonomous reluctance generator p105
Instantaneous current-vector-controlled zero-current soft switching inverter using B-SITs p1
Real-time detection using wavelet transform and neural network of short-circuit faults within a train in DC transit systems p251
Signal flow graph nonlinear modelling of interleaved converters p410

POWER SYSTEM CONTROL

Adaptive directive neural network control for three-phase AC/DC PWM converter p425
Autonomous reluctance generator p105
Combined magnetising flux oriented control of the cascaded doubly-fed induction machine p35
Control strategy of advanced 25 kV-50 Hz electrified railway systems p97
Development considerations of DSP-controlled PWM VSC-based STATCOM p449
Development of a linear brushless DC motor drive with robust position control p111
Digitally-controlled PWM inverter modulated by multi-random technique with fixed switching frequency p62
Field-weakening regime for brushless DC motors based on instantaneous power theory p265
H control of induction motor drives p272
High-power-factor single-phase capacitor clamped rectifier p214
Instantaneous current-vector-controlled zero-current soft switching inverter using B-SITs p1
Integrated power factor compensator based on sliding mode controller p237
Low-harmonic resonant CLL-type AC/DC converter p187
Maximum power point tracking control of IDB converter supplied PV system p494
Novel analytical model for design and implementation of three-phase active power filter controller p369
Novel fast-acting predictive current mode controller for power electronic converters p133
Parallel operation of series-connected PWM voltage regulators without control interconnection p141
Passivity-based adaptive controllers for quasi-resonant buck convertor p398
Performance evaluation of doubly-fed twin stator induction machine drive with voltage and current space vector control schemes p287
Phase-shift controlled DC-DC convertor with bi-directional power flow p193
Robust control for induction servo motor drive p279
Robust hysteresis current-controlled PWM scheme with fixed switching frequency p503
Robust output tracking control of a linear DC brushless motor for transportation in manufacturing system p119
Robust quantitative speed control of a switched reluctance motor drive p345
Simplified control method for single-phase multilevel active rectifier with current harmonic filtering characteristics p85
Single-stage high-power-factor dimmable electronic ballast with asymmetrical pulse-width-modulation for fluorescent lamps p125
Single-stage high power factor electronic ballast for fluorescent lamps with constant power operation p465
Single-stage photovoltaic energy conversion system p339
Stability of sliding-mode current control for high performance induction motor position drives p69
Three-phase soft-switching inverter for induction motor drives p8
Torque ripple minimisation in a switched reluctance motor by optimum harmonic current injection p322
Zero-current switching fixed frequency resonant-transition square wave converters p475

POWER SYSTEM PROTECTION

Effects of grounding schemes on rail potential and stray currents in Taipei Rail Transit Systems p148

POWER SYSTEMS AND APPLICATIONS

Quasiresonant soft switching PWM voltage-fed high frequency inverter using SIT for induction heating applications p385
Robust output tracking control of a linear DC brushless motor for transportation in manufacturing system p119
Single-switch AC-AC converter with high power factor and soft commutation for induction heating applications p469

POWER SYSTEMS AND PLANTS

Control strategy of advanced 25 kV-50 Hz electrified railway systems p97
Design and implementation of a modified Fourier analysis harmonic current computation technique for power active filters using DSPs p21
Development considerations of DSP-controlled PWM VSC-based STATCOM p449
Digital method for power frequency measurement using synchronous sampling [comment and reply] p225
Integrated power factor compensator based on sliding mode controller p237
Maximum power point tracking control of IDB converter supplied PV system p494
Novel analytical model for design and implementation of three-phase active power filter controller p369
Real-time detection using wavelet transform and neural network of short-circuit faults within a train in DC transit systems p251
Simplified control method for single-phase multilevel active rectifier with current harmonic filtering characteristics p85
Single-stage photovoltaic energy conversion system p339

POWER TRANSMISSION AND DISTRIBUTION

Control strategy of advanced 25 kV-50 Hz electrified railway systems p97
Design and implementation of a modified Fourier analysis harmonic current computation technique for power active filters using DSPs p21
Integrated power factor compensator based on sliding mode controller p237
Novel analytical model for design and implementation of three-phase active power filter controller p369
Regular-sampled harmonic elimination PWM control of single-phase two-level inverters p309
Simplified control method for single-phase multilevel active rectifier with current harmonic filtering characteristics p85

PREDICTIVE CONTROL

Novel fast-acting predictive current mode controller for power electronic converters p133

PRODUCTION ENGINEERING

Operating partial core transformers under liquid nitrogen conditions p293

SELF-ADJUSTING SYSTEMS

Adaptive directive neural network control for three-phase AC/DC PWM converter p425
Passivity-based adaptive controllers for quasi-resonant buck convertor p398

SEMICONDUCTOR DEVICE MODELLING

Design considerations and loss analysis of zero-voltage switching boost converter p29
High-power semiconductor device: a symmetric gate commutated turn-off thyristor p363

SEMICONDUCTOR DEVICES

Auxiliary resonant snubber bridge-leg associated soft-switching PWM inverter type DC-DC converter family with bidirectional active switches and voltage clamping diodes p487
Design considerations and loss analysis of zero-voltage switching boost converter p29
Design optimisation of a resonant turn-off snubber for high-power converters p229
Development considerations of DSP-controlled PWM VSC-based STATCOM p449
High-power semiconductor device: a symmetric gate commutated turn-off thyristor p363
Instantaneous current-vector-controlled zero-current soft switching inverter using B-SITs p1
Quasiresonant soft switching PWM voltage-fed high frequency inverter using SIT for induction heating applications p385
Snubber circuit for diode-clamped four-level inverter and converter p481
Turn-off behaviour of epitaxial planar and trench gate IGBTs and nonepitaxial planar gate IGBT under hard and soft switchings p443

SENSORS AND ACTUATORS

Development of a linear brushless DC motor drive with robust position control p111

SYNCHRONOUS MACHINES

Autonomous reluctance generator p105
Robust quantitative speed control of a switched reluctance motor drive p345
Three-phase autonomous reluctance generator p438
Torque ripple minimisation in a switched reluctance motor by optimum harmonic current injection p322
Vibration behaviour of stators of switched reluctance motors p257

TRANSFORMERS

A bidirectional, sinusoidal, high-frequency inverter design p315
Analysis and design of non-dissipative active clamp for forward converters p419
Application of local memory-based techniques for power transformer thermal overload protection p163
Control strategy of advanced 25 kV-50 Hz electrified railway systems p97
Low-harmonic resonant CLL-type AC/DC converter p187
Operating partial core transformers under liquid nitrogen conditions p293
Partial-core transformer design using reverse modelling techniques p513
Single-stage electronic ballast with unity power factor p171

TRANSPORTATION

Control strategy of advanced 25 kV-50 Hz electrified railway systems p97
Effects of grounding schemes on rail potential and stray currents in Taipei Rail Transit Systems p148
Phase-shift controlled DC-DC convertor with bi-directional power flow p193
Railway junction traffic control by heuristic methods p77
Real-time detection using wavelet transform and neural network of short-circuit faults within a train in DC transit systems p251
Robust output tracking control of a linear DC brushless motor for transportation in manufacturing system p119
